Summary

This report looks at 8 Frontiers journals and asks a simple question: is the type of research each one publishes drifting away from where it started in 2020? Across all of them, about 1 in 6 papers (15.6%) now falls outside the journal's core subject areas. Three journals — Materials, Neurorobotics and Environmental Science — have moved the furthest from their original focus. A page of plain-language commentary and supporting detail follows for each journal.

Scope Drift & OOS Summary by Journal

Journal	Papers	OOS	OOS %	JSD 2026	Drift
Fr. Materials	3,123	453	14.5%	0.379	High
Fr. Neurorobotics	1,037	203	19.6%	0.378	High
Fr. Environmental Science	7,093	1,367	19.3%	0.343	High
Fr. Robotics and AI	1,791	277	15.5%	0.314	Moderate
Fr. Earth Science	7,870	639	8.1%	0.280	Moderate
Fr. Chemistry	6,003	953	15.9%	0.239	Low
Fr. Surgery	5,885	1,052	17.9%	0.232	Low
Fr. Aging Neuroscience	5,420	1,021	18.8%	0.145	Low

A note on how to read this report: This analysis is based purely on citation patterns (which papers cite which), not on reading the papers themselves. Citation-based methods like this can misclassify certain paper types — methods papers and meta-analyses in particular tend to cite (and be cited by) a much wider range of fields than their own subject matter would suggest, so they can appear more “out-of-scope” than they really are. Scope itself is also defined statistically here: a journal's “primary” clusters are simply whichever citation communities together account for 80% of its papers. This threshold is applied uniformly across all journals and hasn't been tuned per journal, so some journals may need a different cutoff to reflect their actual editorial scope. Treat the figures below as a useful signal for further investigation, not a definitive scope audit.

Materials shows the clearest signs of scope movement in this review. Compared with where the journal stood in 2020, the mix of research it publishes has shifted noticeably — a change of this size (JSD 0.38) means the papers coming in today look meaningfully different from the ones that defined the journal a few years ago.

Right now, about 14% of Materials's papers (453 out of 3,123) fall outside its core subject clusters — mostly work related to Thermal Energy Management, Dental Health. This out-of-scope share has risen since 2020. At the same time, the journal is concentrating more tightly around a smaller set of themes rather than spreading out. Its largest single topic area today is “Sustainable Construction Materials.”

Scope split

Community composition

Community	Status	Papers	Share of journal
Sustainable Construction Materials	In-scope	875	28.0%
Advanced Materials Engineering	In-scope	660	21.1%
Electrochemical Materials	In-scope	567	18.2%
Materials Science	In-scope	355	11.4%
Cancer Immunotherapy	In-scope	213	6.8%
Thermal Energy Management	Out-of-scope	100	3.2%

Example papers

In-scope

Prediction of flow stress and microstructure evolution mechanism during thermal tensile process of ZK60 alloy

Pitting Judgment Model Based on Machine Learning and Feature Optimization Methods

In situ Resource Utilization and Reconfiguration of Soils Into Construction Materials for the Additive Manufacturing of Buildings

Global trends in the research of biodegradable biomedical magnesium-based materials: a bibliometric analysis

Cement–ash concrete with the addition of lime kiln dust

Out-of-scope

The PFILSTM model: a crack recognition method based on pyramid features and memory mechanisms

Magnetic fluid sealing status estimation based on acoustic emission monitoring

Sub-severe hail: the missing piece in assessing asphalt shingle risk in North America

Deep learning-based image classification for microstructural analysis in computational materials science

Effects of Unloading on Subsequent Yielding Behavior in 304 Stainless Steel

Neurorobotics shows the clearest signs of scope movement in this review. Compared with where the journal stood in 2020, the mix of research it publishes has shifted noticeably — a change of this size (JSD 0.38) means the papers coming in today look meaningfully different from the ones that defined the journal a few years ago.

Right now, about 20% of Neurorobotics's papers (203 out of 1,037) fall outside its core subject clusters — mostly work related to Artificial Intelligence Applications, Electrochemical Materials. This out-of-scope share has fallen since 2020. At the same time, the journal is concentrating more tightly around a smaller set of themes rather than spreading out. Its largest single topic area today is “Image Processing Applications.”

Scope split

Community composition

Community	Status	Papers	Share of journal
Image Processing Applications	In-scope	276	26.6%
Rehabilitation And Biomechanics	In-scope	221	21.3%
Control Systems Optimization	In-scope	193	18.6%
Neurodegenerative Diseases	In-scope	144	13.9%
Artificial Intelligence Applications	Out-of-scope	44	4.2%
Electrochemical Materials	Out-of-scope	30	2.9%

Example papers

In-scope

Noisy Dueling Double Deep Q-Network Algorithm for Autonomous Underwater Vehicle Path Planning

Neuro-motor Controlled Wearable Augmentations: Current Research and Emerging Trends

4D Trajectory Lightweight Prediction Algorithm Based on Knowledge Distillation Technique

A method for the estimation of a motor unit innervation zone center position evaluated with a computational sEMG model

Research on autonomous route generation method based on AIS ship trajectory big data and improved LSTM algorithm

Out-of-scope

The use of deep learning technology in dance movement generation

Optimal UAV's Deployment and Transmit Power Design for Two Users Uplink NOMA Systems

The SocialAI School: A framework leveraging Developmental Psychology Towards Artificial Socio-Cultural Agents

Editorial: Robust Artificial Intelligence for Neurorobotics

P3OI-MELSH: Privacy Protection Target Point of Interest Recommendation Algorithm Based on Multi-Exploring Locality Sensitive Hashing

Environmental Science shows the clearest signs of scope movement in this review. Compared with where the journal stood in 2020, the mix of research it publishes has shifted noticeably — a change of this size (JSD 0.34) means the papers coming in today look meaningfully different from the ones that defined the journal a few years ago.

Right now, about 19% of Environmental Science's papers (1,367 out of 7,093) fall outside its core subject clusters — mostly work related to Electrochemical Materials, Sustainable Construction Materials. This out-of-scope share has fallen since 2020. The spread of topics it covers has stayed fairly stable. Its largest single topic area today is “Environmental Monitoring.”

Scope split

Community composition

Community	Status	Papers	Share of journal
Environmental Monitoring	In-scope	2,629	37.1%
Sustainable Development	In-scope	2,171	30.6%
Agricultural And Environmental Sciences	In-scope	926	13.1%
Electrochemical Materials	Out-of-scope	608	8.6%
Sustainable Construction Materials	Out-of-scope	156	2.2%
Image Processing Applications	Out-of-scope	91	1.3%

Example papers

In-scope

Large-scale experimental warming reduces soil faunal biodiversity through peatland drying

Assessing Ecological Environmental Quality and Conservation Effectiveness in the World's Largest Urban Green Heart Using the Remote Sensing Ecological Index (RSEI) and Propensity Score Matching (PSM)

Geospatial Environmental Influence on Forest Carbon Sequestration Potential of Tropical Forest Growth in Hainan Island, China

Changes in Urban Gas-Phase Persistent Organic Pollutants During the COVID-19 Lockdown in Barcelona

Threadfin Porgy (*Evynnis Cardinalis*) Haplotype Pattern and Genetic Structure in Beibu Gulf, South China Sea

Out-of-scope

Enhancing environmental management through big data: spatial analysis of urban ecological governance and big data development

Effects of Topographic Variables on Traffic-related Pollutant Concentrations: Comparison of AERMOD and CAL3QHCR Models

Study on the biodegradation of phenol by *Alcaligenes faecalis* JH1 immobilized in rice husk biochar

Evaluation of the factors affecting arsenic distribution using geospatial analysis techniques in Dongting Plain, China

How top managers' sport experience exploits environmental proactivity in state-owned enterprises.

Robotics and AI is showing a moderate amount of movement away from its 2020 starting point (JSD 0.31). This isn't dramatic, but the journal's content mix has evolved enough to be worth keeping an eye on.

Right now, about 16% of Robotics and AI's papers (277 out of 1,791) fall outside its core subject clusters — mostly work related to Virtual Reality Education, Space Weather Studies. This out-of-scope share has risen since 2020. The spread of topics it covers has stayed fairly stable. Its largest single topic area today is “Control Systems Optimization.”

Scope split

Community composition

Community	Status	Papers	Share of journal
Control Systems Optimization	In-scope	354	19.8%
Artificial Intelligence Applications	In-scope	309	17.3%
Electrochemical Materials	In-scope	301	16.8%
Image Processing Applications	In-scope	203	11.3%
Rehabilitation And Biomechanics	In-scope	136	7.6%
Sustainable Development	In-scope	106	5.9%

Example papers

In-scope

Editorial: Robotic Manipulation and Capture in Space

Drive competition underlies effective allostatic orchestration

Trauma-Informed Care Approach in Developing Companion Robots: A Preliminary Observational Study

Risk-Aware Model-Based Control

Mind Your Manners! A Dataset and a Continual Learning Approach for Assessing Social Appropriateness of Robot Actions

Out-of-scope

A robot localization proposal for the RobotAtFactory 4.0: A novel robotics competition within the Industry 4.0 concept

From the lab to the field with Evolutionary Field Robotics

Rehabilitation assessment of upper limb motor function in stroke patients based on semi-quantitative information

Impact analysis of cooperative perception on the performance of automated driving in unsignalized roundabouts

Human-AI co-research on design and evaluation of Embodied Conversational Agent in rehabilitation contexts

Earth Science is showing a moderate amount of movement away from its 2020 starting point (JSD 0.28). This isn't dramatic, but the journal's content mix has evolved enough to be worth keeping an eye on.

Right now, about 8% of Earth Science's papers (639 out of 7,870) fall outside its core subject clusters — mostly work related to Sustainable Development, Agricultural And Environmental Sciences. This out-of-scope share has risen since 2020. The journal is also spreading across a wider range of topics rather than staying tightly focused. Its largest single topic area today is “Geological Sciences.”

Scope split

Community composition

Community	Status	Papers	Share of journal
Geological Sciences	In-scope	3,981	50.6%
Environmental Monitoring	In-scope	1,716	21.8%
Sustainable Construction Materials	In-scope	1,534	19.5%
Sustainable Development	Out-of-scope	109	1.4%
Agricultural And Environmental Sciences	Out-of-scope	87	1.1%
Space Weather Studies	Out-of-scope	80	1.0%

Example papers

In-scope	Out-of-scope
An efficient spectral element method for two-dimensional magnetotelluric modeling	Mechanical characteristics analysis of horizontal lifting of subsea pipeline with different burial depths
Stress triggering of the 2022 Lushan–Maerkang earthquake sequence by historical events and its implication for fault stress evolution in eastern Tibet	Evolution of roof treatment processes from blasting to hydraulic fracturing to prevent rockburst in thick-hard roof coal mines in Xinjiang, China
Comparing Greenland Ice Sheet Melt Variability From Different Satellite Passive Microwave Remote Sensing Products Over a Common 5-year Record	On evaluating the possible hazard of soil contamination in arid regions using statistical analysis and GIS techniques
Specific features of marine electrotomographic studies of coastal areas of the gulf of Finland	Editorial: Developments of remote sensing and numerical modeling applications for landslide analysis
Soil gas CO2 emissions from active faults: a case study from the Anninghe—Zemuhe fault, Southeastern Tibetan Plateau, China	Estimates of volcanic mercury emissions from Redoubt Volcano, Augustine Volcano, and Mount Spurr eruption ash

Chemistry remains close to its original scope. Its content mix has changed only slightly since 2020 (JSD 0.24), which suggests the journal is publishing consistently within its intended focus.

Right now, about 16% of Chemistry's papers (953 out of 6,003) fall outside its core subject clusters — mostly work related to Agricultural And Environmental Sciences, COVID-19 Health Impacts. This out-of-scope share has risen since 2020. The journal is also spreading across a wider range of topics rather than staying tightly focused. Its largest single topic area today is "Electrochemical Materials."

Scope split

Community composition

Community	Status	Papers	Share of journal
Electrochemical Materials	In-scope	2,051	34.2%
Cancer Immunotherapy	In-scope	1,068	17.8%
Organic Synthesis	In-scope	1,067	17.8%
Materials Science	In-scope	434	7.2%
Gut Health Research	In-scope	430	7.2%
Agricultural And Environmental Sciences	Out-of-scope	123	2.0%

Example papers

In-scope

Fuzzy Logic, Artificial Neural Network, and Adaptive Neuro-Fuzzy Inference Methodology for Soft Computation and Modeling of Ion Sensing Data of a Terpyridyl-Imidazole Based Bifunctional Receptor

Identification, Efficacy, and Stability Evaluation of Succinimide Modification With a High Abundance in the Framework Region of Golimumab

Review of Synthesis and Evaluation of Inhibitor Nanomaterials for Oilfield Mineral Scale Control

Editorial: Chemical Insights Into the Synthetic Chemistry of Quinazolines and Quinazolinones: Recent Advances

Optimization of Automatic Synthesis and Separation of [18F] AV-45 and Quality Control

Out-of-scope

Spectral denoising based on Hilbert–Huang transform combined with F-test

Accelerate the Electrolyte Perturbed-Chain Statistical Associating Fluid Theory–Density Functional Theory Calculation With the Chebyshev Pseudo-Spectral Collocation Method. Part II. Spherical Geometry and Anderson Mixing

Recent Advances in Metal/Alloy Nano Coatings for Carbon Nanotubes Based on Electroless Plating

Nanostructures Formed by Custom-Made Peptides Based on Amyloid Peptide Sequences and Their Inhibition by 2-Hydroxynaphthoquinone

Synthesis of vancomycin functionalized fluorescent gold nanoparticles and selective sensing of mercury (II)

Surgery remains close to its original scope. Its content mix has changed only slightly since 2020 (JSD 0.23), which suggests the journal is publishing consistently within its intended focus.

Right now, about 18% of Surgery's papers (1,052 out of 5,885) fall outside its core subject clusters — mostly work related to peripheral topics. This out-of-scope share has fallen since 2020. At the same time, the journal is concentrating more tightly around a smaller set of themes rather than spreading out. Its largest single topic area today is "Cancer Immunotherapy."

Scope split

Community composition

Community	Status	Papers	Share of journal
Cancer Immunotherapy	In-scope	1,181	20.1%
Orthopedic Surgery	In-scope	1,119	19.0%

Sarcoma Research	In-scope	272	4.6%

Example papers

In-scope

Correlation Between Poor Defecation Habits and Postoperative Hemorrhoid Recurrence

Case report: Giant cystic ileal gastrointestinal stromal tumor with an atypical intratumoral abscess

Comprehensive clinical analysis of patients with primary malignant tumor of pituitary gland: A population-based study

Relationship Between Serum ECP and TlgE Levels and the Risk of Postoperative Recurrence in Patients with Chronic Rhinosinusitis with Nasal Polyps

Pediced iliac bone flap grafting in the treatment of late presentation Legg–Calvé–Perthes disease

Out-of-scope

The Heterogenous Effect of COVID-19 on Liver Transplantation Activity and Waitlist Mortality in the United States

Facial nerve reconstruction for flaccid facial paralysis: a systematic review and meta-analysis

Case report: Type I diastematomyelia with breast abnormalities and clubfoot

A survey on nasolabial moulding treatment practices at cleft centres across India

Case report: Leptospirosis with multi-organ failure complicated by massive upper gastrointestinal bleeding in a non-epidemic setting with successful management

Aging Neuroscience remains close to its original scope. Its content mix has changed only slightly since 2020 (JSD 0.14), which suggests the journal is publishing consistently within its intended focus.

Right now, about 19% of Aging Neuroscience's papers (1,021 out of 5,420) fall outside its core subject clusters — mostly work related to Gut Health Research, Geriatric Health. This out-of-scope share has risen since 2020. The journal is also spreading across a wider range of topics rather than staying tightly focused. Its largest single topic area today is “Neurodegenerative Diseases.”
